# ABOUT THE FACTORY

WAKE WOOD is one of the largest Ukrainian manufacturers of interior doors.

Since its foundation in 1996, we have adhered to three core principles: our doors must be stylish, reliable, and made of natural materials. Following these principles has helped us create a brand that embodies European design and quality.

Today, our production employs a wide variety of materials, including fine wood veneer, enamel, glass, and aluminium. The use of cutting-edge engineering and design solutions — such as concealed frames, reverse-opening doors, invisible hinges, and magnetic locks — allows us to create more functional and elegant interiors.

THE FACTORY PROVIDES A 5-YEAR WARRANTY  
ON ALL PRODUCTS!

AVAILABLE  
IN STOCK

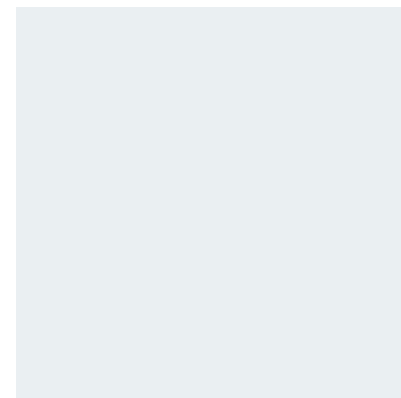

# OPTIMUM

A collection of concealed installation doors, an affordable line.

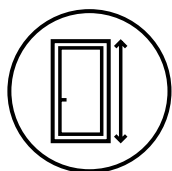

Door structures that are invisible in the room. Only the door handle reveals their location. The same materials used for wall finishing can also be applied to the door leaf.

# CONCEALED DOORS

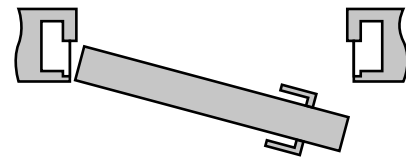

A complete rejection of traditional architraves is a modern trend. We offer a wide range of doors with concealed aluminium frames — from doors ready for finishing to veneered, painted, and glass doors.

# FIRE-RESISTANT DOORS

**Fire-resistant doors** are specially designed doors that prevent the spread of fire and the penetration of smoke for 30 or 60 minutes. They have a defined fire-resistance rating, are certified, and comply with the state building safety regulations of Ukraine and the relevant national standards (DSTU).

## INSTALLATION LOCATIONS

- Offices, hotels, shopping centres
- Hospitals, schools, institutes, kindergartens, and other institutions
- Industrial facilities
- Residential buildings and apartments
- Electrical switchboard and server rooms
- Basements, attics, and roof exits
- Stair landings in public buildings

## INTUMESCENT STRIP

At high temperatures, the sealing strip expands and fills the gap between the door leaf and the frame, thereby preventing smoke from penetrating in case of fire.

## FIRE-RESISTANT CORE

Inside the door leaf, there is a non-combustible magnesite board and basalt wool.

## AUTOMATIC DROP-DOWN SEAL

The automatic drop-down seal lowers when the door is closed and covers the gap between the door leaf and the floor, preventing smoke from entering the premises during a fire.

# DOOR OPENING SYSTEMS

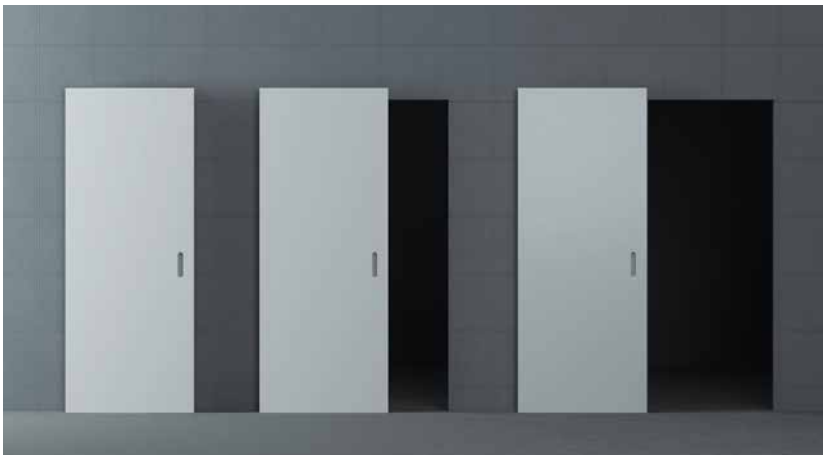

## SLIDING SYSTEM

In this system, the door leaf is installed parallel to the opening and slides along the wall on special guides. The mechanism is concealed under a cornice matching the door leaf colour. The door opening can also be framed upon request.

- 1 - wall
- 2 - mechanism
- 3 - door leaf

## SYSTEM "MAGIC"

This system differs from the standard sliding one in that the mechanism is mounted on the wall, while the supporting profile is embedded into the door leaf. Thanks to this design solution, all mechanisms are hidden from view, allowing you to fully enjoy the door's smooth and elegant movement.

- 1 - wall
- 2 - mechanism
- 3 - door leaf
